# High-Speed Services for Internet Access: Status as of December 31, 2006 

## Industry Analysis and Technology Division Wireline Competition Bureau October 2007

This report is available for reference in the FCC's Reference Information Center, Courtyard Level, 445 12th Street, SW, Washington, DC. Copies may be purchased by contacting Best Copy and Printing, Inc., 445 12th Street, SW, Room CY-B402, Washington, DC 20554, telephone (800) 378-3160, or via their website at www.bcpiweb.com. The report can also be downloaded from the Wireline Competition Bureau Statistical Reports Internet site at www.fcc.gov/wcb/stats.

## High-Speed Services for Internet Access: Status as of December 31, 2006

Congress directed the Commission and the states, in section 706 of the Telecommunications Act of 1996, to encourage deployment of advanced telecommunications capability in the United States on a reasonable and timely basis. ${ }^{1}$ To assist in its evaluation of such deployment, the Commission instituted a formal data collection program (FCC Form 477) to gather standardized information about subscribership to high-speed services, including advanced services, from wireline telephone companies, cable system operators, terrestrial wireless service providers, satellite service providers, and any other facilities-based providers of advanced telecommunications capability. ${ }^{2}$

We summarize here information from the fifteenth semi-annual data collection, thereby presenting a snapshot of subscribership as of December 31, 2006. ${ }^{3}$ High-speed lines connecting homes and businesses to the Internet increased by $27 \%$ during the second half of 2006, from 65.0 million to 82.5 million lines in service, following a $27 \%$ increase, from 51.2 million to 65.0 million lines, during the first half of 2006. For the full twelve month period ending December 31, 2006, highspeed lines increased by $61 \%$ (or 31.3 million lines). The presence of high-speed service subscribers was reported in all 50 states, the District of Columbia, American Samoa, Guam, Northern Mariana Islands, Puerto Rico, and the Virgin Islands, and in over 99\% of the Zip Codes in the United States.

Twice a year, all facilities-based providers of high-speed connections to end users are required to report to the Commission basic information about their service offerings and types of customers. ${ }^{4}$ Prior to June 2005, providers with fewer than 250 high-speed lines (or wireless channels) in
${ }^{1}$ See §706, Pub.L. 104-104, Title VII, Feb. 8, 1996, 110 Stat. 153, reproduced in the notes under 47 U.S.C. § 157. We use the term "high-speed" to describe services that provide the subscriber with transmissions at a speed in excess of 200 kilobits per second (kbps) in at least one direction. "Advanced services," which provide the subscriber with transmission speeds in excess of 200 kbps in each direction, are a subset of high-speed services.
${ }^{2}$ Local Competition and Broadband Reporting, CC Docket No. 99-301, Report and Order, 15 FCC Rcd 7717 (2000); Local Telephone Competition and Broadband Reporting, WC Docket No. 04-141, Report and Order, 19 FCC Rcd 22340 (2004). During this data gathering program, qualifying entities file FCC Form 477 each year on March 1 (reporting data for the preceding December 31) and September 1 (reporting data for June 30 of the same year). The first data collected by Form 477 were data as of December 31, 1999. An updated Form 477, and instructions for that particular form, for each specific round of the data collection may be downloaded from the FCC Forms website at www.fcc.gov/formpage.html.
${ }^{3}$ Statistical summaries of the earlier Form 477 data collections appeared in Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, CC Docket No. 98-146, Second Report, 15 FCC Rcd 20913 (2000) (Second 706 Report), available at www.fcc.gov/broadband/706.html, and in previous releases of the High-Speed Services for Internet Access report, available at www.fcc.gov/wcb/stats.
${ }^{4}$ The terms "broadband connections" (which is used as a synonym for "high-speed connections" in the Form 477 program) and "facilities-based provider" are defined on the first page of the Form 477 instructions that are available at www.fcc.gov/formpage.html, and the term "end users" is defined on the third page. Facilities-based providers report information about high-speed connections they provide directly to their own end-user customers and also high-speed connections they provide to Internet Service Providers for resale to end users.
service in a particular state were not required to report data for that state. ${ }^{5}$ Small providers of high-speed connections, many of whom serve rural areas with relatively small populations, were therefore underrepresented in the earlier data. Including these providers resulted in a substantial one-time increase in the number of holding companies and unaffiliated entities reporting information about high-speed connections from December 31, 2004 to June 30, 2005. ${ }^{\text {. }}$

The data reported for December 31, 2006 include detail about the information transfer rates ("speeds") of the reported connections and a breakdown of high-speed connections by type of technology. ${ }^{7}$ The reported data also enable us to estimate, for individual states, the extent to which Digital Subscriber Line (DSL) high-speed connections provided by incumbent local exchange carriers (incumbent LECs), and cable modem high-speed service provided by cable system operators, are available to households residing in the areas these companies serve.

Readers can draw the following broad conclusions from the data summarized in this report:

- High-speed lines (or wireless channels) connecting homes and businesses to the Internet at speeds that exceed 200 kbps in at least one direction increased from 65.0 million lines to 82.5 million lines during the second half of 2006. For the full twelve month period ending December 31, 2006, high-speed lines increased by 31.3 million, from 51.2 million lines to 82.5 million lines. See Table 1 and Chart 1.
- ADSL lines increased by 2.8 million lines during the second half of 2006 compared to an increase of 3.2 million lines for cable modem service. For the full year, ADSL lines increased by 5.9 million lines compared to an increase of 5.5 million lines for cable modem service. See Table 1.
- Of the 82.5 million total high-speed lines, $38.9 \%$ were cable modem, $30.8 \%$ were ADSL, $1.2 \%$ were symmetric DSL (SDSL) or traditional wireline, $1.2 \%$ were fiber to the end user premises, and $27.8 \%$ used other technologies. ${ }^{8}$ See Chart 2.

[^0]- Lines connecting homes and businesses to the Internet at transmission speeds that exceed 200 kbps in both directions increased from 50.8 million lines to 59.5 million lines during the second half of 2006. For the full twelve month period ending December 31, 2006, they increased by 15.6 million, from 43.9 million lines to 59.5 million lines. See Table 2 and Chart 3.
- Of the 59.5 million lines which were faster than 200 kbps in both directions, $53.3 \%$ were cable modem, $35.5 \%$ were ADSL, $1.7 \%$ were SDSL or traditional wireline, $1.7 \%$ were fiber to the end user premises, and $7.7 \%$ used other technologies. See Chart 4.
- Of the 82.5 million total high-speed lines, 58.2 million were designed to serve primarily residential end users. Cable modem represented $53.6 \%$ of these lines while $39.1 \%$ were ADSL, $0.2 \%$ were SDSL or traditional wireline connections, $1.3 \%$ were fiber to the end user premises, and $5.8 \%$ used other technologies. See Table 3 and Chart 6 . For state-specific data, see Table 13.
- Of the 59.5 million lines that were faster than 200 kbps in both directions, 53.5 million lines were designed to serve primarily residential end users. Of these, cable modem represented $57.7 \%$ while $35.3 \%$ were ADSL, $0.2 \%$ were SDSL or traditional wireline, $1.4 \%$ were fiber to the end user premises, and $5.4 \%$ used other technologies. See Table 4 and Chart 8.
- Of the 59.5 million reported high-speed lines that were faster than 200 kbps in both directions as of December 31, 2006, $63 \%$ were at least 2.5 mbps in the faster direction and $37 \%$ were slower than 2.5 mbps in the faster direction. See Table 5.
- Incumbent LECs or their affiliates reported $97 \%$ of ADSL connections and $49 \%$ of traditional wireline connections. When all technologies are considered, incumbent LECs reported 53\% of total high-speed connections. See Table 6.
- High-speed lines were reported in all 50 states, the District of Columbia, American Samoa, Guam, Northern Mariana Islands, Puerto Rico, and the Virgin Islands. See Table 9 and, for historical data, Tables 10-12.
- As a nationwide average, we estimate that high-speed DSL connections were available to $79 \%$ of the households to whom incumbent LECs could provide local telephone service, and that high-speed cable modem service was available to $96 \%$ of the households to whom cable system operators could provide cable TV service. See Table 14.
- The Commission's data collection program requires providers to list the Zip Codes in which the provider has at least one high-speed connection in service to an end user, and over $99 \%$ of Zip Codes were listed by at least one provider. ${ }^{9}$ The most widely reported technologies by this measure were satellite (with at least some presence reported in 91\% of Zip Codes), ADSL (in $84 \%$ of Zip Codes), and cable modem (in $65 \%$ of Zip Codes). ADSL and/or cable modem connections were reported to be present in $90 \%$ of Zip Codes. ${ }^{10}$ See Tables 15 and 16. For state-specific data, see Table 17.
- Our analysis indicates that more than $99 \%$ of the country's population lives in the more than $99 \%$ of Zip Codes where a provider reports having at least one high-speed service subscriber. Moreover, numerous competing providers report serving high-speed subscribers in the major population centers of the country. See the map that follows Table 16.
- High population density has a positive association with reports that high-speed subscribers are present, and low population density has an inverse association. For example, high-speed subscribers were reported to be present in more than $99 \%$ of the most densely populated Zip Codes and in $90 \%$ of Zip Codes with the lowest population densities. ${ }^{11}$ The comparable figure for the lowest-density Zip Codes was $88 \%$ a year earlier. See Table 18.
- High median household income also has a positive association with reports that high-speed subscribers are present. In the top one-tenth of Zip Codes ranked by median household income, high-speed subscribers are reported in $99 \%$ of Zip Codes. By contrast, high-speed subscribers are reported in $91 \%$ of Zip Codes with the lowest median household income, compared to $90 \%$ a year earlier. See Table 19.

As other information from the Commission's data collection program (FCC Form 477) becomes available, it will be included in future reports on the deployment of advanced telecommunications capability and in publications such as this one.

[^1]We invite users of this information to provide suggestions for improved data collection and analysis by:

- Using the attached customer response form,
- E-mailing comments to James.Eisner@fcc.gov or Suzanne.Mendez@fcc.gov,
- Calling the Industry Analysis and Technology Division of the Wireline Competition Bureau at (202) 418-0940, or
- Participating in any formal proceedings undertaken by the Commission to solicit comments for improvement of FCC Form 477.

5.2\%

## Notes for Tables 1-6 and Charts 1-10.

Advanced services lines, residential high-speed lines, and residential advanced services lines are estimated based on data reported on FCC Form 477. Therefore, figures may not add to totals due to rounding.
${ }^{1}$ High-speed lines are connections to end-user locations that deliver services at speeds exceeding 200 kbps in at least one direction. Advanced services lines, which are a subset of high-speed lines, are connections that deliver services at speeds exceeding 200 kbps in both directions. In Tables 2 and 4, we enumerate those reported high-speed lines that also qualify as advanced services lines. More detailed information about connection speeds is presented in Table 5. Line counts presented in this report are not adjusted for the number of persons at a single end-user location who have access to, or who use, the Internet-access services that are delivered over the high-speed connection to that location.
${ }^{2}$ The mutually exclusive types of technology are, respectively: Asymmetric digital subscriber line (ADSL) technologies, which provide speeds in one direction greater than speeds in the other direction; symmetric digital subscriber line (SDSL) technologies; traditional wireline technologies when used to provide equivalent Internet access functionality, including Ethernet service if delivered to the subscriber's location over copper (as opposed to optical fiber) plant; cable modem, including the typical hybrid fiber-coax (HFC) architecture of upgraded cable TV systems; optical fiber to the subscriber's premises (e.g., Fiber-to-the-Home, or FTTH); satellite and fixed and mobile terrestrial wireless systems, which use radio spectrum to communicate with a radio transmitter; electric power line; and other.
${ }^{3}$ Fiber lines included electric power line through December 2004.
${ }^{4}$ RBOC lines include lines owned by AT\&T, Qwest and Verizon, and their affiliates.
${ }^{5}$ High-speed lines reported by non-ILEC affiliates of RBOCs are reported in the column for RBOC lines and are excluded from the column for non-ILEC lines. Lines reported by non-ILEC affiliates of ILECs other than the RBOCs are reported in the column for non-ILEC lines.

Table 7
Nationwide Number of Providers of High-Speed Lines by Technology
(Over 200 kbps in at least one direction)

|  | ADSL | Cable Modem | All Other ${ }^{\mathbf{1}}$ | Total |
| :---: | :---: | :---: | :---: | :---: |
| Dec 1999 | 28 | 43 | 65 | 105 |

| Jun 2001 | 86 | 47 | 98 | 160 |
| Dec 2001 | 117 | 59 | 122 | 203 |
| Jun 2002 | 142 | 68 | 138 | 237 |
| Dec 2002 | 178 | 87 | 169 | 299 |
| Jun 2003 | 235 | 98 | 217 | 378 |
| Dec 2003 | 274 | 110 | 246 | 432 |
| Jun 2004 | 298 | 129 | 281 | 485 |
| Dec 2004 | 352 | 147 | 312 | 552 |
| Jun 2005 | 758 | 227 | 779 | 1,270 |
| Dec 2005 | 820 | 242 | 835 | 1,347 |
| Jun 2006 | 832 | 254 | 814 | 1,324 |
| Dec 2006 | 862 | 278 | 882 | 1,397 |

For data through December 2004, only those providers with at least 250 lines per state were required to file. Some historical data have been revised.
${ }^{1}$ All other includes SDSL, traditional wireline, fiber, satellite, fixed and mobile wireless, and power line.

[^3]xDSL includes both asymmetric and symmetric DSL. Each state-specific estimate is a weighted average of the availability percentages that ILECs or cable system operators report for the areas they serve. Reported xDSL availability is weighted by ILEC end-user switched access lines. Reported cable modem availability is weighted by cable TV subscribers. The weighted averages include ILECs or cable system operators that report no availability.

${ }^{1}$ Persons per square mile and median household income are presented in decile groups. Each decile group contains $10 \%$ of the reported geographic Zip Codes for which the demographic information, as of the year 2000, is available in Demographic Power Pack, Current Year Update (2000), MapInfo Corporation.

## Customer Response

Publication: High-Speed Services for Internet Access: Status as of December 31, 2006
You can help us provide the best possible information to the public by completing this form and returning it to the Industry Analysis and Technology Division of the FCC's Wireline Competition Bureau.

1. Please check the category that best describes you:

- 

press
___ current telecommunications carrier
___ potential telecommunications carrier
__ business customer evaluating vendors/service options
___ consultant, law firm, lobbyist
___ other business customer
__ academic/student
___ residential customer
___ FCC employee
__ other federal government employee
___ state or local government employee
__ Other (please specify)
2. Please rate the report: Excellent Good Satisfactory Poor No opinion Data accuracy Data presentation Timeliness of data Completeness of data Text clarity Completeness of text

[^0]:    ${ }^{5}$ High-speed lines reported in voluntary submissions of data prior to June 2005 represented less than $0.05 \%$ of total reported high-speed lines. As of June 30, 2005, filers with fewer than 250 lines in a state (including some entities that previously made voluntary submissions) represented about $0.2 \%$ of total reported high-speed lines.
    ${ }^{6}$ The nationwide number of holding companies and unaffiliated entities reporting high-speed lines increased from 552 as of December 31, 2004 to 1,270 as of June 30, 2005. See Table 7.
    ${ }^{7}$ Some Internet-access connections that telephone companies, cable system operators, and wireless service providers offer do not meet the 200 kbps criterion for reporting high-speed connections to the Commission, but may nevertheless meet the needs of the subscribers who select them over a more expensive service option.
    ${ }^{8}$ Providers are instructed to report a high-speed connection in the (mutually exclusive) technology category that characterizes the last few feet of distribution plant to the subscriber's premises. In addition to cable modem, ADSL, SDSL, traditional wireline when used for Internet access, and optical carrier (fiber to the end user) connections, reporting entities specify satellite, terrestrial fixed wireless (licensed or unlicensed), terrestrial mobile wireless (licensed or unlicensed), electric power line, or "all other" technology. See additional notes following Chart 10.

[^1]:    ${ }^{9}$ Lists of Zip Codes with number of service providers as reported in the FCC Form 477 filings are made available at www.fcc.gov/wcb/stats in a format that honors requests for nondisclosure of information the reporting entities assert is competitively sensitive.
    ${ }^{10}$ The $90 \%$ figure (more precisely, $89.5 \%$ ) includes ZIP codes with either ADSL subscribers reported, cable modem subscribers reported, or both. In $59.5 \%$ of ZIP codes, both ADSL and cable modem subscribers have been reported. In $24.3 \%$ of ZIP codes, there are ADSL subscribers reported but no cable modem subscribers, and in $5.7 \%$ of ZIP codes there are cable modem subscribers reported but no ADSL subscribers reported.
    ${ }^{11}$ For this comparison, we consider the most densely populated Zip Codes to be those with more than 3,147 persons per square mile (the top decile of Zip Codes) and the least densely populated Zip Codes to be those with fewer than 6 persons per square mile (the bottom decile).
